How fit do I need to be for this trek?

- The Annapurna Circuit is a tough challenge, at altitude, but one that is very achievable with the correct training. It requires a reasonable level of strength, stamina and determination. Your training should incorporate aerobic (endurance building), anaerobic (strength building) exercises and some good long walks!
- High Altitude Sickness is a real issue. It can affect anyone, including the fittest athletes alive (and Sir Edmund Hillary - the first summiteer of Everest!) so make sure you take all the necessary precautions after 3000m.
- That includes taking **Diamox** (if you wish, but consult with your doctor), staying hydrated, fuelling up and getting adequate rest. If you feel symptoms, let your guide know and take action.

WHAT IS THE SCENERY LIKE ON THE ANNAPURNA CIRCUIT TREK?

Simply stunning.

The Annapurna Circuit is often considered to be not only the best trek in Nepal, but in the world. The reason for this is the stunning vistas and constant views of Annapurna summits. The circuit takes you through a number of climatic zones which take in rice paddy fields, sub-tropical forests, rural farmland and glacial zones. You will also see great views of some of the world's giants including Annapurna I, Annapurna Massif (I-IV), Manaslu (8,156 meters) and Dhaulagiri (8,176 meters).
